## **DETAILED ACTION**

### ***Election/Restrictions***

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

*Species (I):* A driving circuit of a DC microwave oven including an excessive current detecting unit; and

*Species (II):* A driving circuit of a DC microwave oven including a switch monitor unit and door sensing switch unit.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 3742

2. The claims are deemed to correspond to the species listed above in the following manner:

*Species (I)*: **Claims 1-6, 12-15 and 19-25**; and

*Species (II)*: **Claims 7-11 and 16-18**.

The following claim(s) are generic: no.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: *Species (I)* requires the use of an excessive current detecting unit in the DC microwave oven to monitor the current from the power supply to control the pulse generating unit while *Species (II)* is drawn to a microwave oven driving circuit which uses a switch monitor unit detect the state of the oven door to control the voltage of the transformer. Each species therefore directs to a different special technical feature.

4. Applicant is advised that a complete reply to this requirement must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
